

# Projects

The above mentioned tasks were transformed into specific projects during the planning phase of the network. The following list gives presently ongoing projects. Projects already finished can be found in Archives.

## **mitoGENE** project page

Providing innovative and cutting edge technology for molecular diagnosis of mitochondrial disorders.

**Technische Universität München**

## **mitoGLOBAL**

<http://genomit.eu>

World-wide registry harmonisation within the E-Rare projekt GENOMIT.

**Munich**

## **mitoHEART**

CMR-based diagnosis of cardiac involvement in patients with mitochondrial myopathy

**University hospital Münster**

## **mitoMETABO**

Biomarker discovery for disease, progression and treatment by metabolomics

**Greifswald**

## **mitoNET** project page

Coordination of the network, it's communication and subprojects.

**University of Munich, Technical University of Munich and City-Hospital Ludwigshafen**

## **mitoPROT** project page

Developing a simple and highly sensitive assay to quantify the five mitochondrial oxidative phosphorylation complexes from patient samples, and screening the cohort of patients of the consortium by the novel protocol.

**University of Frankfurt**

## **mitoREGISTRY**

Recruitment and phenotyping of patients, documentation in web-based register, enabling natural history and controlled clinical studies.

**University of München**

## **mitoSAMPLE**

To collect biological materials and make them available to network partners

**Technische Universität München**

## **mitoVALID** project page

**München**

## **mitoWEAR**

Longitudinal patient monitoring with wearable devices

**Heidelberg**
